# WANG Yuxiang

Nuova Accademia di Belle Arti, Milano (NABA)

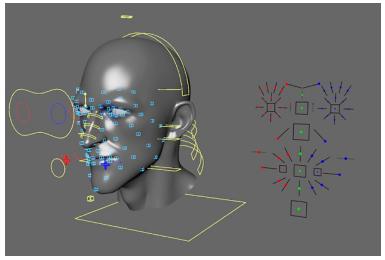
---

I am a creator focused on character rigging, technical art, and visual storytelling, with experience in game design, short films, and 3D/VFX production. I am continuously exploring the intersection of technical tools and artistic expression.

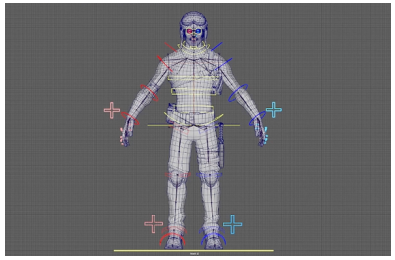
Major: Creative Technology — Game / Animation Track

Undergraduate, Class of 2026

# Featured Projects



**Face Rigging Project**

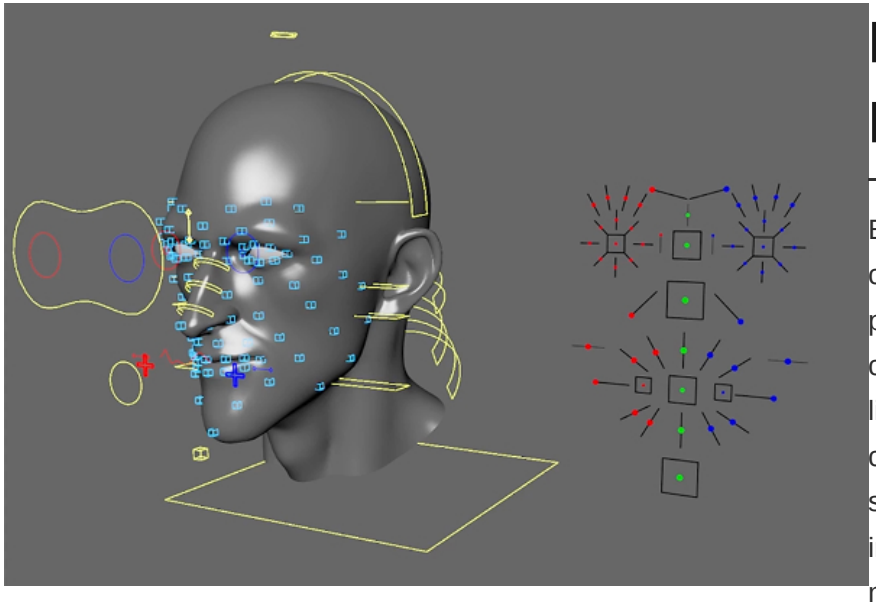


**Full Body Rigging Project**

**Taison Project**

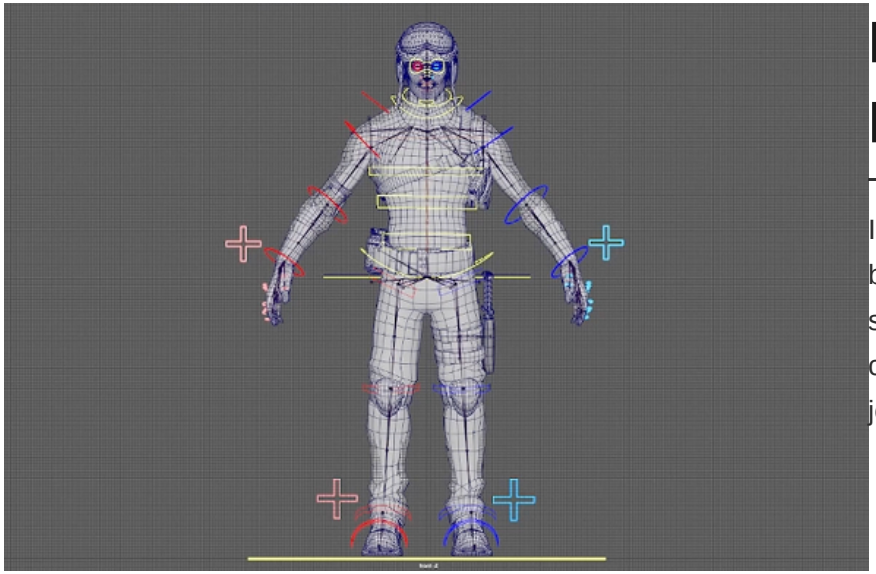
**UE PCG Project**

**Whiteout Game Dev Project**



# Face Rigging Project

Built a complete facial rigging system using a custom-made facial rigging toolkit. The project covers facial skeleton setup, controller creation, weight painting, GUI design & linking, eye functionality, Wrap4D blendshape creation & import, code-based blendshape system in Maya, and integrating blendshapes into the existing rig pipeline. It also includes mouth expression drivers, zipper lips, overall lip control, mouth-jaw/nose linkage, wrinkle normal map creation & connection, eyebrow-forehead coordination, secondary controller integration with SDK mirroring, common Deformer applications, and head squash & stretch for expression enhancement.



# Full Body Rigging Project

Implemented a full-body rigging system with basic scripting support, featuring IK/FK switching, spine IK, limb stretch & twist (with counter-flip), corrective shapes, and helper joints.

# Taison Project

An abstract, concept-driven short film created collaboratively in UE5. All assets were made by the team. I contributed to most stages — from ideation, storyboarding, and character work to VFX. The piece was shortlisted for the Italian national TGA competition and exhibited in Rome.

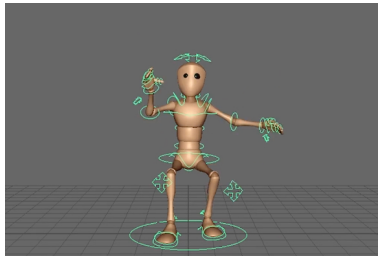
# UE PCG Project

A UE5 learning project inspired by online tutorials. I built a set of procedural assets to form the main landscape, then added procedural foliage and a focal-point tree created in SpeedTree. Fog cards, lighting, and bird-flock particles complete the atmosphere.

# Whiteout Game Dev Project

Created during a Global Game Jam. As a team project, I was mainly responsible for art and contributed gameplay design ideas.

# Other Projects



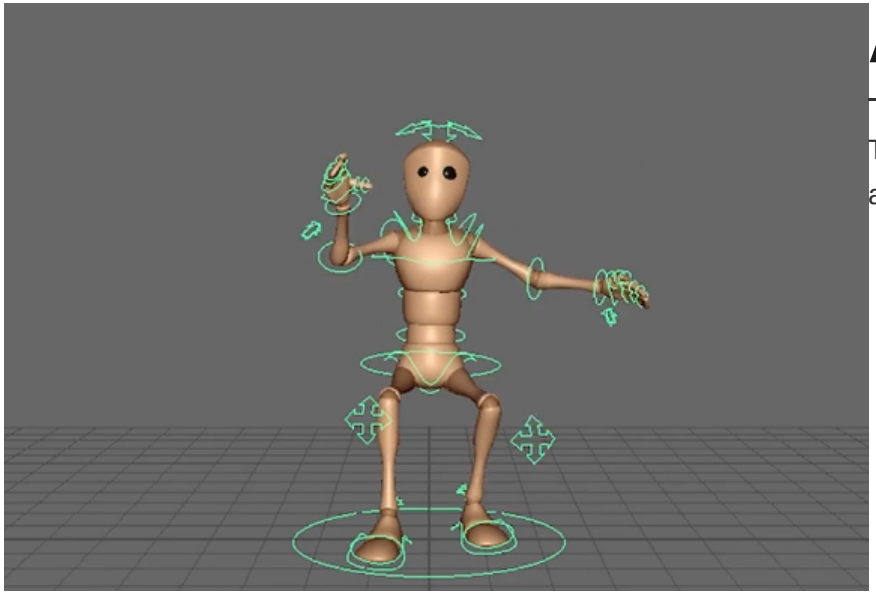
**Animation Project**

**Film Directing Portfolio**

**DaVinci Project**

**Maya Lighting Project**

**Nuke Project**



# Animation Project

This project focused on hand-keying a short animation clip.

# Film Directing Portfolio

A collection of past directing, cinematography, and lighting works.

# DaVinci Project

This project explored DaVinci Resolve color grading and VFX features, including primary and secondary color correction.

# Maya Lighting Project

This project focused on creating a sunset lighting scene in Maya.

# Nuke Project

A summary and showcase of my Nuke learning, including keying, tracking, and color management.

- **Screen Replacement**
  Replaced on-screen content with target footage.
- **Camera Tracking**
  Completed 3D camera solve for live-action footage.
- **Text Replacement**
  Replaced existing text information in the footage.
- **Green Screen Replacement**
  Completed keying and rebuilt background environment.
