WANG Yuxiang

Nuova Accademia di Belle Arti, Milano (NABA)

- Major: Creative Technology — Game / Animation Track
- Undergraduate, Class of 2026

I am a creator focused on character rigging, technical art, and visual storytelling, with experience in game design, short films, and 3D/VFX production. I am continuously exploring the intersection of technical tools and artistic expression.

Featured Projects

01 Face Rigging Project

02 Full Body Rigging Project

03 Taison Project

04 UE PCG Project

05 Whiteout Game Dev Project

Other Projects

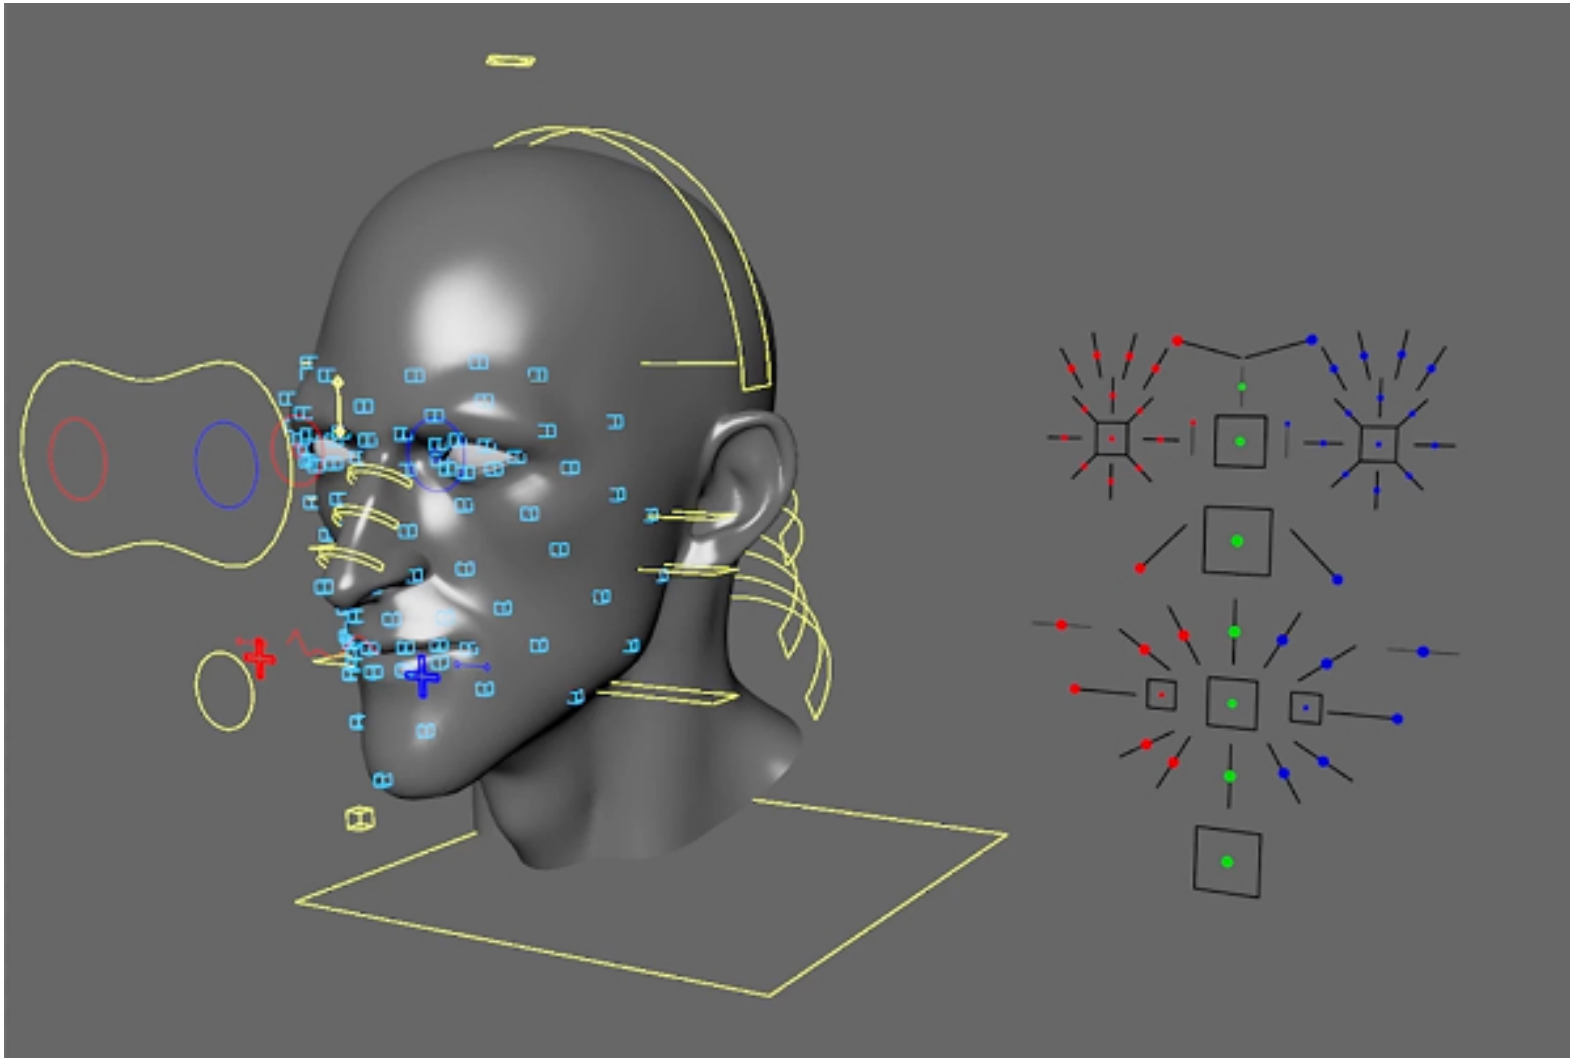
06 Animation Project

07 Film Directing Portfolio

08 DaVinci Project

09 Maya Lighting Project

10 Nuke Project



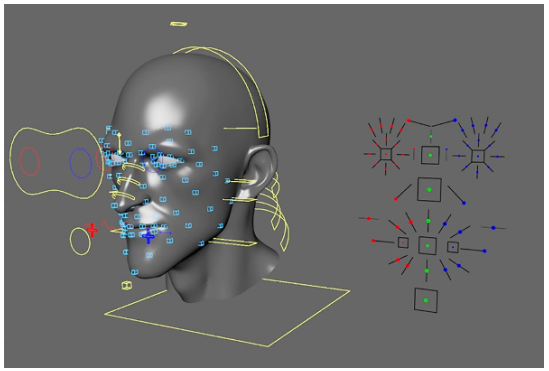
01

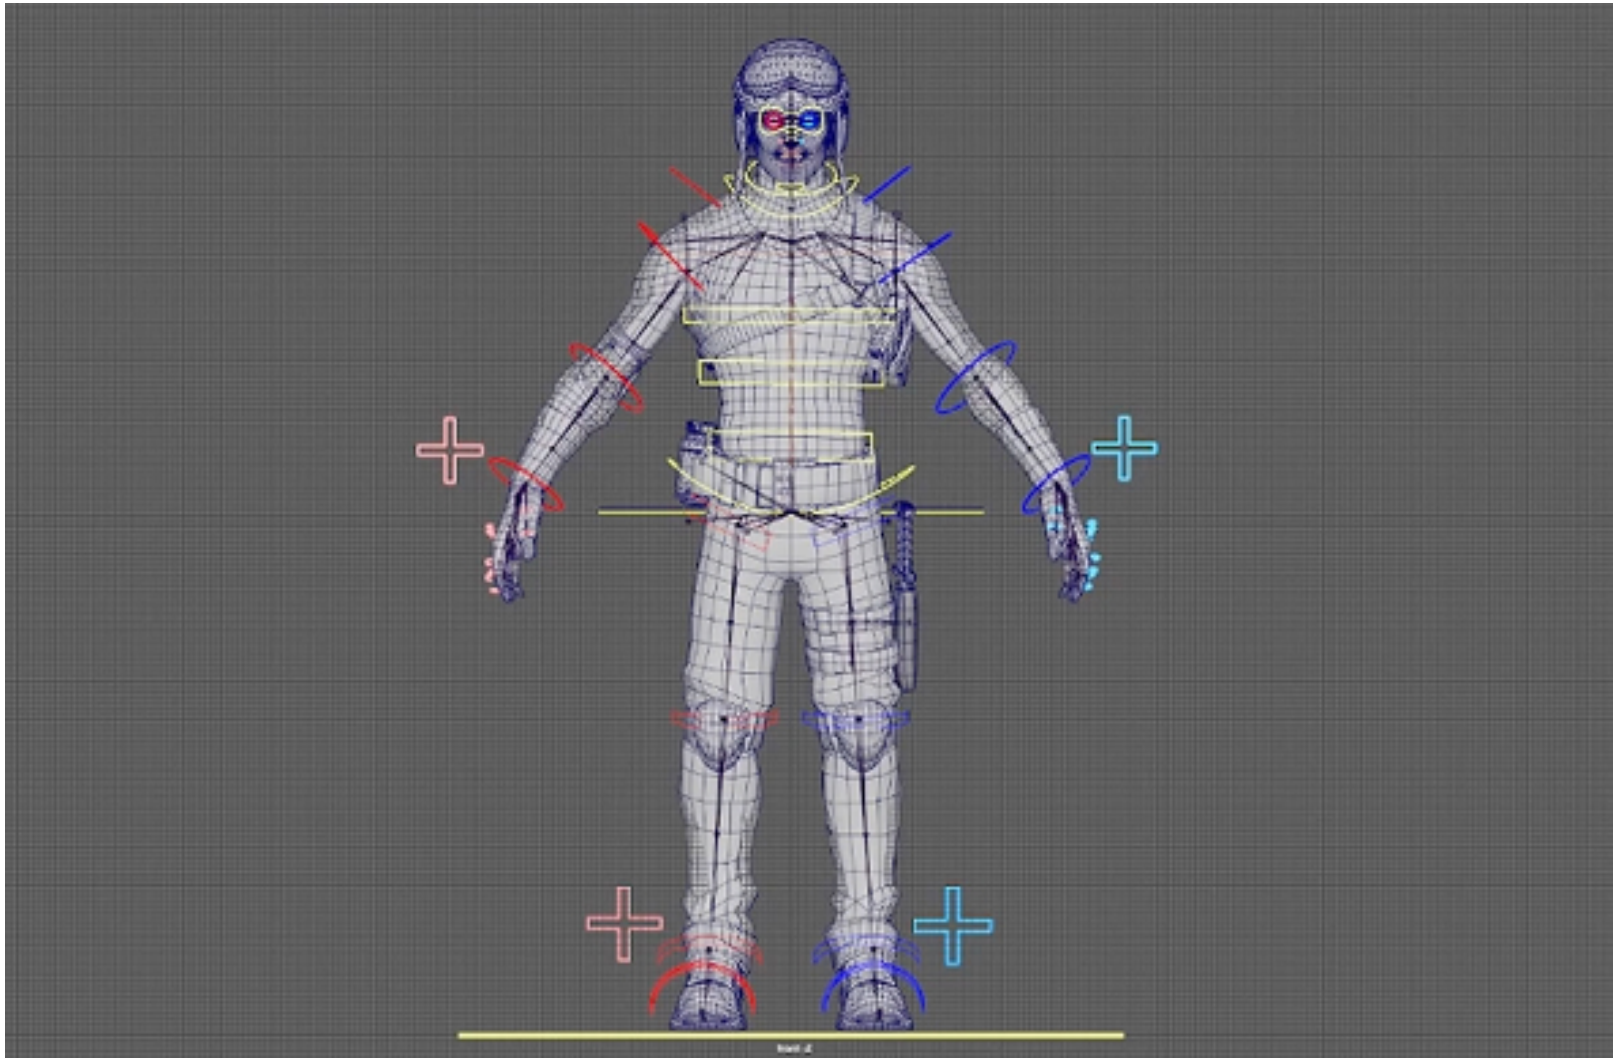
Face Rigging Project

01 — Featured

Face Rigging Project

Built a complete facial rigging system using a custom-made facial rigging toolkit. The project covers facial skeleton setup, controller creation, weight painting, GUI design & linking, eye functionality, Wrap4D blendshape creation & import, code-based blendshape system in Maya, and integrating blendshapes into the existing rig pipeline. It also includes mouth expression drivers, zipper lips, overall lip control, mouth-jaw/nose linkage, wrinkle normal map creation & connection, eyebrow-forehead coordination, secondary controller integration with SDK mirroring, common Deformer applications, and head squash & stretch for expression enhancement.





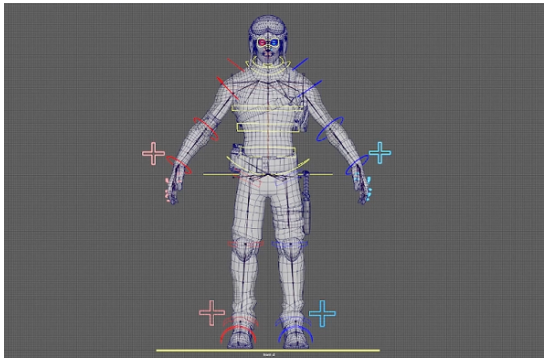
02

Full Body Rigging Project

02 — Featured

Full Body Rigging Project

Implemented a full-body rigging system with basic scripting support, featuring IK/FK switching, spine IK, limb stretch & twist (with counter-flip), corrective shapes, and helper joints.



03

Taison Project

03 — Featured

Taison Project

An abstract, concept-driven short film created collaboratively in UE5. All assets were made by the team. I contributed to most stages — from ideation, storyboarding, and character work to VFX. The piece was shortlisted for the Italian national TGA competition and exhibited in Rome.

04

UE PCG Project

04 — Featured

UE PCG Project

A UE5 learning project inspired by online tutorials. I built a set of procedural assets to form the main landscape, then added procedural foliage and a focal-point tree created in SpeedTree. Fog cards, lighting, and bird-flock particles complete the atmosphere.

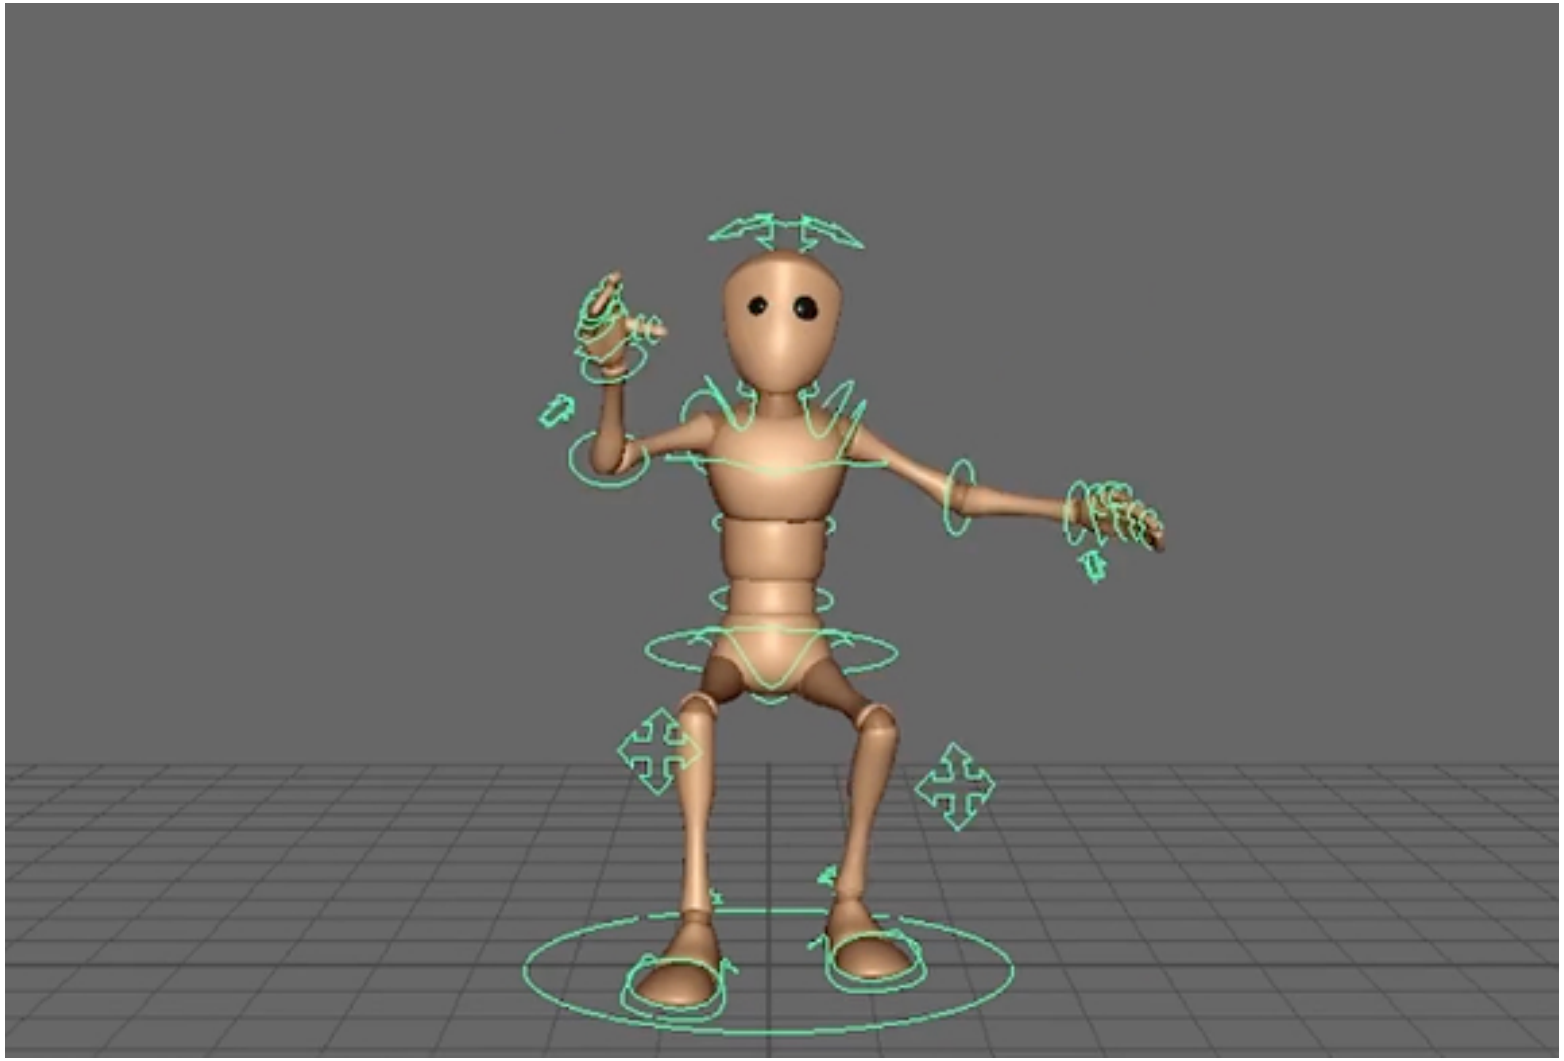
05

Whiteout Game Dev Project

05 — Featured

Whiteout Game Dev Project

Created during a Global Game Jam. As a team project, I was mainly responsible for art and contributed gameplay design ideas.



06

Animation Project

07

Film Directing Portfolio

07 — Other

Film Directing Portfolio

A collection of past directing, cinematography, and lighting works.

08

DaVinci Project

08 — Other

DaVinci Project

This project explored DaVinci Resolve color grading and VFX features, including primary and secondary color correction.

09

Maya Lighting Project

09 — Other

Maya Lighting Project

This project focused on creating a sunset lighting scene in Maya.

Nuke Project

Nuke Project

A summary and showcase of my Nuke learning, including keying, tracking, and color management.

BREAKDOWN

Screen Replacement
Replaced on-screen content with target footage.

Camera Tracking
Completed 3D camera solve for live-action footage.

Text Replacement
Replaced existing text information in the footage.

Green Screen Replacement
Completed keying and rebuilt background environment.

Thank You
